Dear Mr. Miller

Please do not allow the San Jacinto River to become further contaminated. We need a permanent solution that will protect our families now, not two years from now. Please install a permanent cap so the river can be restored to its natural beauty for future generations. Thank you.

Sincerely,

(b) (6)

Dear Mr. Miller

I've been hearing from a lot of different people about the remediation options available, and I took the time to listen and form an opinion based on facts. Dig and haul sounds nice, but we have no way of knowing what almost two years of dredging up that garbage could do to other communities further down river. A permanent cap would protect the river from further dioxin contamination, and avoid the risk to as of now unaffected areas. It just makes the most sense.

Sincerely,

(b) (6)
